

**Oded** — Enable Medicine (petabyte-scale spatial biology platform)

**Yue** — EM / Pathos / Tempus AI (foundation models, 1,000 H200s)

Backed by Y Combinator

# Our Vision

We build the **missing data layer** for the next generation of medicine — transforming sparse patient profiles into complete multimodal datasets through biological imputation.

# What we can do for Insitro

## Services

- **Inference optimization** — we took CZI's VariantFormer from ~\$93 to \$1.50/sample  
63x faster · zero accuracy loss
- **GPU infrastructure** — deep expertise running large-scale Bio/ML workloads  
H200s · B200s

## Model Building

- **Imputation models from paired datasets** — we build cross-modal prediction models so you can infer missing data
- **Currently training H&E → mIF model** — pan-cancer virtual staining  
193 biomarkers · 3.4M patches · 50x larger than SOTA

\*We can work within your VPC or run on Strand AI compute and deliver the results.
